Letter to the Customer

To the passionate restaurant operators,

We understand it takes a lot to run a successful restaurant. Serving the best food, keeping up with trends, managing your operations, and taking care of your customers — so you can grow your business — are all in a day's work.

While you spend hours updating menus and making sure your guests get the best service, there's probably not as much time to think about critical items for front- and back-of-house. To support you, our team is highly knowledgeable in the area of Equipment and Supplies. We are always seeking the best products to help improve your operations, and we work with hundreds of suppliers to negotiate the best prices, ensuring you can find just the right items when you need them.

Our 2026 E&S catalog highlights the best and most-popular supplies available through Performance. With items already stocked in our divisions or available through direct ship, you can trust that our team has the right solutions for your needs.

We are proud to be your partner in fueling your restaurant's success. Count on us to handle your E&S solutions so you can focus on your customers.

Please reach out with any questions,
Your Performance Equipment and Supply specialists

PERFORMANCE DIRECT

CAN'T FIND THE TIME TO SEARCH FOR SMALLWARES?

We carry 1,000's of restaurant supply items that are only a click away. Order right along with the rest of the goods you trust us to deliver. Your items will ship the next day and be delivered right to your door.

No small order charges. No additional shipping charges.
The price you see is the price you pay.

We bring our warehouse
to your doorstep.

How to Use a Sharpening Steel

Hold the steel vertically on a non-slip surface with your left hand and the knife in your right hand (the opposite applies for left-handed individuals.) As you move the blade from the bolster at a 20° angle from one side to the other, be sure to use light pressure and an arching motion, moving the arm and not the wrist. Some knives with the elite edge require the use of only fine-cut or smooth steels at a 15° angle. It is recommended that you use a steel that is longer than the blade of your knife. Depending upon

the frequency and use of a knife, the edge will become dull with its edge turning either to the right or to the left. A sharpening steel is critical for maintaining the best performance of your cutlery.

Using a sharpening stone to regrind your edge will eventually be necessary. With gentle pressure, pull the edge of the blade in a 15-20° angle across the stone from the bolster of the blade to its tip. Repeat the same procedure on the other side of the edge. Continue this process until the new edge is formed.

How Knives Dull

Knives get dull because the edge folds, not, as popularly believed, because the edge wears away and gets blunt.

- There's no such thing as a "never-needs-sharpening" knife. So-called "never-needs-sharpening" knives are serrated. Serrated knives DO get dull. The tips of the serrations fold.

To delay dulling a sharp edge must have two main characteristics:

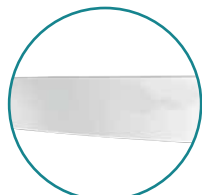

- **SYMMETRICAL:** A perfectly straight, symmetrical edge does not tend to lean in one direction or the other and thus does not fold as easily.
- **ARCH-SHAPED:** An edge with more metal behind it resists folding longer than a thin, weak "V"-shaped or hollow-ground edge.

Sharpening Options

- Sharpening steels (and other devices which include rods) straighten the edge vs. actually sharpening it (creating a fresh, new edge). They take skill and effort to use. The unfolded edge is still weak and will immediately start to fold again. Eventually the edge is too weak to strengthen and the knife must be completely resharpened.
- Manual sharpeners with washers/discs lack reliable angle control and sharpen by skiving off pieces of the edge.
- Sharpening stones resharpen the edge. They take uncommon skill to hold the correct sharpening angles. It takes time and effort to use a stone.
- Sharpening services resharpen the edge. Many use inexpensive grinding wheels that overheat (detemper) knife edges and take off too much metal. Excess heat weakens the blade so it does not sharpen as well or stay sharp as long. Some professional services are more skilled than others.
- Electric sharpeners resharpen the edge. They sharpen safely and effectively and put stronger, longer-lasting arch-shaped edge on the knife.

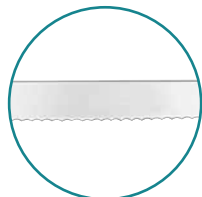

Different Blade Shapes

For different cutting tasks different blade shapes and edges are recommended. The differences are:

Straight Edge

Allows a smooth and clean cut. When carving no fibres are torn out of the meat. This edge can be used for firm and soft food like meat, vegetables and fruit.

Serrated Edge

The wavy or serrated edge allows an easy cut through crusty food like a traditional roast and crispy bread.

Hollow Edge

When cutting, an air pocket is created between the hollow edge and the slice. This prevents food from sticking to the blade and allows for finer slices.

Garnishing Knife – Create crinkle-cut french fries, decorative garnishes and crudities, even eye-catching butter patties.

Paring Knife – The knife used most frequently. Cuts, peels and dices fruits, vegetables, cheese and meats.

Boning Knife – Deboning chicken or ham, trimming fat and sinews. The tapered, pointed blade is a necessity for working closely around joints.

Utility Knife – Excellent for food preparation or almost any kitchen chore from cutting vegetables and meats to halving sandwiches.

Chef's Knife – (Also known as Cook's Knife or French Knife). It is the most essential of all knives used in the kitchen. Used for all kinds of heavy-duty cutting, as well as chopping, dicing and mincing of virtually every kind of food. Perfectly balanced, an extension of your hand.

Carving Knife – Ideal for ham and large cuts of meat and for breaking down larger fruits and vegetables.

Bread Knife – Slices breads, delicate fruits and vegetables. Cuts through hard crust for uniform slicing.

Fillet Knife – Filleting delicate fish or preparing carpaccio – it's easier with this extra thin, flexible blade.

Steel – Realigns the knife edge. Should be used frequently to maintain sharpness.

Fork – The perfect complement to any carving or slicing knife. Provides a secure hold, especially on the tail end of a joint of meat.

COOKWARE GUIDE

Aluminum

Aluminum is the most common material for cookware, as it is an excellent conductor of heat and is inexpensive compared to stainless steel or copper cookware. Although features such as the lid, handle and finish are important, thickness is the key element of quality. The thicker the pan, the better the heat dispersion. Aluminum is reactive and the soft metal dents and scratches easily. To compensate for these drawbacks, manufacturers have developed anodized aluminum cookware, in which the pans undergo electrolytic processing that makes the outer surface both harder and less reactive.

Stainless Steel

Stainless steel quality is determined by nickel content. In general, the greater the nickel content, the better the quality, as nickel allows a brighter, more durable rust resistant luster. Although durable, non-reactive and beautiful, stainless steel is a poor heat conductor. Inexpensive cookware is prone to hot spots and warping over high heat. Stainless steel is most effective with an aluminum or copper disc added to the bottom.

Traditional vs. Nonstick

There are advantages to both traditional and nonstick pans. The latter are easy to clean and require very little cooking fat, while traditional surfaces excel at developing fond, those crusty, stuck-on bits of food that add deep flavor and color to pan sauces. Light-colored interior finishes make it easy to watch for signs of burnt drippings.

KITCHEN

Stock Pots

Excellent for preparing large quantities of seasoned liquids, pastas, soups, bulk vegetables and seafood. Ideal for slow simmering.

Fry Pans

Fry small tender foods such as eggs, fish, chicken pieces, pork chops and soft vegetables. Shallow sides for easy stirring and sliding food out of the pan.

Braziers

Wide heating surface allows the cooking of meats and vegetables in limited amounts of liquid. Ideal for long, slow cooking which allows the liquid to add juices and flavor.

Sauté Pans

Straight-sided pan is ideal for stir-frying beef, chicken, pork, shrimp and vegetables. Browning vegetables, quick stewing and poaching are other uses for this heavy frying pan.

Sauce Pots

Wide bottom area for maximum heat conduction. Ideal for slow cooking stews, sauces, soups, casseroles and roasts while reducing the content.

Sauce Pans

Excellent for cooking soup, vegetables, sauces and for simmering and boiling foods in liquid.

0°

-10°

Store frozen foods below 0°F.

Handling Guidelines

Maintain cold foods at or below 40°F.
Maintain hot foods at or above 140°F.

Potentially hazardous hot food should be cooled rapidly. 140°F cooled to 70°F within 2 hours. 70°F cooled to 40°F within 4 hours. Using shallow pans with a product depth of no greater than 2 inches, the food should be placed in a refrigerator uncovered or loosely covered during the cooling process.

Never defrost food at room temperature. Use a refrigerator, continuously running cold water, a microwave or cook from frozen state. Frozen food that has been thawed should be cooked or otherwise processed before it may be refrozen.

Cook foods to the proper internal temperature. Use a metal probe thermometer to ensure food is cooked properly.

Wash your hands thoroughly with hot soapy water (before and after handling food) for a minimum of 20 seconds.

Avoid handling food when: you are ill, have a skin infection, or have cuts on the hands.

Never cross contaminate from raw to cooked products.

Wash, rinse and sanitize cutting boards and knives between every use.

Reheat leftovers to 165°F internal temperature or higher, stirring constantly to cook evenly or microwave to 195°F. Never reheat leftovers more than once.

Keep kitchens, dining areas and storage rooms free from insects and rodents. Store chemicals away from food.

JANITORIAL

GRILL & GRIDDLE | CLEANING

DAILY GRIDDLE CLEANING

JANITORIAL

Consistent, daily griddle cleaning is important to help maintain food quality. To cut down on closing cleaning time, make sure you're wiping down the backsplash, side splashes, and the front every so often during service, as well as emptying the grease drawer as needed.

The exact cleaning steps on your griddle plate type—steel or chrome—so be sure to consult the owner's manual for the manufacturer's recommendations. For both types, be sure to always allow it to cool to 300° to 350°F before using a scraper on the surface. Never use ice to speed up the cooling process, as it may cause thermal shock and damage the surface.

nemco FOOD EQUIPMENT

BRUSH TYPE GUIDE

Choose the Best Brush for Your Specific Needs

Nylon

Excellent abrasion resistance, shear/break strength, and bristle bend recovery. Very good chemical resistance and sustains temperatures up to 350°F. Best choice for abrasive, rough use.

Polyester

Excellent chemical resistance, ultra violet light resistance, and bristle bend recovery. Very good abrasion resistance, and tear/break strength. Sustains temperatures up to 125°F. Best choice for all around use and for extreme exposure to cleaning chemicals.

Polypropylene

Stiff and long-lasting bristles work well under any conditions. Resistant to chemicals, oil and water making them ideal for back-of-house cleaning.

Horsehair

A natural pointed tip, good shear/break resistance, and soft cleaning properties. Good durability and excellent blending properties make this an ideal choice for interior floor sweeps when blended with other fibers.

Palmyra

Natural medium stiff fibers from India palms is an excellent choice for general floor sweeps. Provides good durability and bristle recovery.

Tampico

Natural Tampico fiber from the Mexican agave plant is a soft to medium soft bristle with very good durability. Good choice for finer floor sweeps and general cleaning scrub brushes.

Stainless Steel Wire

Rust proof, excellent chemical resistance, excellent bend recovery, provides a high degree of abrasion and wear resistance. Best foodservice choice for aggressive cleaning on grills and other heavily soiled foodservice equipment.

Carbon Steel Wire

Provides a high degree of abrasion and wear resistance. Good bend recovery. Best choice for aggressive cleaning on grills and other heavily soiled equipment.

Brass Wire

Rust resistant, provides a high degree of abrasion but is softer than stainless steel or carbon steel to prevent equipment damage. For use on ovens, griddles, and other metal equipment that is heavily soiled but cannot sustain heavy scratches.

CLEANING & SANITATION GUIDE

It's important to maintain a clean facility both for the safety and comfort of your guests. In addition to following policies outlined in local health department codes and procedures in your HACCP plan, here is a basic checklist to help complement any side work tasks you already have in place. Always remember to check manufacturer user manuals for any "do's and don'ts" specific to your equipment.

Daily Front-of-House Tasks

- _____ Sanitize tabletops after each customer
- _____ Clean seating, including waiting area
- _____ Sanitize menus
- _____ Sanitize high-touch surfaces (door handles, counters, etc.)
- _____ Sanitize table settings (condiment containers, napkin dispensers, etc.) and restock
- _____ Clean, sanitize, and restock self-serve areas (beverage and condiment stations, etc.)
- _____ Clean and sanitize toilets, bathroom sinks, and other bathroom surfaces
- _____ Empty bathroom waste bins and replace bags
- _____ Restock paper towels, toilet paper, and soap dispensers
- _____ Empty other waste and recycling bins and replace bags
- _____ Restock self-serve areas
- _____ Vacuum carpets
- _____ Sweep and mop floors
- _____ Spot-clean glass surfaces
- _____ Wipe down walls if needed

Daily Back-of-House Tasks

- _____ Clean and sanitize prep surfaces before starting and between foods
- _____ Clean counterline equipment surfaces and underneath
- _____ Scrape down grills and griddle tops between uses if possible
- _____ Wipe down small and countertop equipment (slicers, microwaves, etc.)
- _____ Clean beverage dispenser heads and soda guns
- _____ Wash smallwares and prep tools as needed
- _____ Empty waste and recycling bins and replace bags
- _____ Restock paper towels and soap dispensers
- _____ Sweep floors in walk-ins and dry storage
- _____ Sweep and mop floors in kitchen
- _____ Degrease surfaces as needed, including floors
- _____ Clean the floor mats
- _____ Clean the sinks
- _____ Wash textiles like towels and aprons (or gather them if you use a service)

CAN LINER GUIDE

Why Gauge Isn't Always Important

Film thickness is no longer a satisfactory standard for judging overall strength. The development of improved LLDPE resin in the liner industry has changed the standard method for selecting can liners. Manufacturers can produce thinner, lighter trash bags that are stronger and more durable than the thicker bags previously made from low density resin. This is why gauge is no longer an effective way to determine liner strength. Instead of stating actual thickness, many liners are now simply described as "Light", "Medium", "Heavy", and "Extra Heavy".

Each manufacturer has its own blend formulations, so the proportions of the materials used vary from one producer to another. The best way to determine the correct liner is to test some suggested samples.

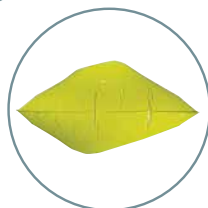

General Industry Strength Rating	Linear Low Density Mil Thickness Range	Old Low Density Strength Rating
Regular	.35 to .50	1.25
Medium	.45 to .75	1.5
Heavy	.60 to 1.0	2.0
Heavy Plus	.74 to 1.3	2.5
Extra Heavy	.90 to 1.5	3.0

Types of Bag Seals

Star Seal (or X-Seal)

This unique design eliminates gaps along the seal where leaks can occur.

Flat Seal

These bags are generally leak-proof, but are very clumsy to handle.

Gusseted Seal

A flat style bag with both sides tucked in to form gussets.

Definitions

Resin - The basic raw material from which can liners are made. There are 3 types of resins: Low Density, Linear Low Density and High Density Polyethylene.

Linear Low Density Polyethylene - This resin is highly puncture and tear resistant. These properties make this the best choice for applications where additional strength and stretch are required. Works well for waste with sharp or jagged edges.

High Density Polyethylene - Liners made from this resin are generally available in lower gauges, and are more temperature resistant.

Low Density Polyethylene - An older resin still used mainly in lower end utility liners. It has largely been replaced by Linear Low Density Polyethylene.

Post Consumer and Post-Industrial Polyethylene - This is made from recycled post-consumer plastics such as milk jugs and industrial scraps. These are reprocessed and blended with other types of resins to produce new high quality liners.

Gauge - A term used to describe the thickness of a liner. Low density liners are measured in mils, while High Density liners are generally measured in microns.

Mil - Measurement based on one hundred thousandths of an inch (.000). For example, a .55 mil bag would be 55 thousandths of an inch thick. Common low density liners range from .37 to 1.8 mil in thickness.

Micron - Based on thousandth of a Millimeter (.000000). High Density liners usually range from 6 to 22 microns in thickness.

Advantages of High Density Can Liners

1. HMW/HD liners are about 3x stronger and more durable than ordinary polyethylene liners of the same thickness
2. They can be made about one-third the thickness of ordinary low density polyethylene liners, so they require only about one-third the ordinary shipping, storage and warehousing cost
3. Substantial cost savings per liner
4. When they are properly made, HMW/HD liners will rarely "zipper" if punctured
5. Extremely wide range of temperature resistance from -40° to 212°F
6. USDA and FDA approved (natural-colored liners)

Suggested applications:

- Cans without rough edges
- Paper
- Disposable dinnerware
- Food
- Dirt or grass
- Rags/cloth items
- Smooth heavy object
- Office waste baskets

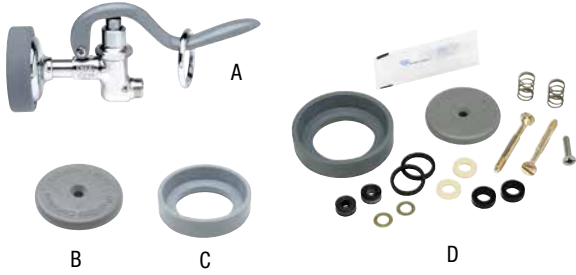

Advantages of Linear Low Density Can Liners

1. Maximum puncture and stretch resistance
2. Multi-purpose applications
3. Most prevalent type of film used in the industry today
4. Manufactured in a wide variety of colors
5. Compared to traditional low density film, linear low can be run at a lighter gauge with equal strength

Suggested applications:

- Stick & rough yard trimmings, small rocks
- Metal w/sharp edges
- Nails & bolts
- Objects w/rough corners or protrusions
- Disposable flatware
- Abusive transport conditions
- Food w/rough edges (like crab legs)

COMMERCIAL DISHWASH RACK GUIDE

Enhance efficiency and cleanliness in your establishment with the right commercial dishwasher racks. Selecting suitable racks ensures clean, sanitized dishes and smallwares, and helps reduce replacement costs.

Dishwasher racks hold dishware, glassware, and flatware during cleaning in commercial dishwashers. Using the proper racks helps prevent chipping and breakage, and ensures proper spacing for effective washing. Various styles are available; choose according to your needs.

Choosing the Right Rack Size

- You will need the diameter and height of your glassware
- Manufacturers offer different compartment combinations to accommodate various sizes

Dishwasher Rack Sizes

- Half-size (20" x 10") and full-size (20" x 20")
- Choose based on storage space, dishware volume, and transportation needs

Height Extenders

- Add 1½" of height to dishwasher racks
- Available for full-size and half-size racks

Types of Commercial Dishwasher Racks

Glass and Cup Racks

- Designed for washing, transporting, and storing glasses, cups, stemware, pitchers, or decanters
- Include compartments for stability, use with extenders for taller glasses

Peg Racks

- Suitable for plates, bowls, trays, or other smallwares
- Pegs provide extra security, help reduce excess wear and tear

Compartment Flatware Racks

- Hold flatware upright, ensure efficient washing and drying
- Available with or without handles for easy transportation

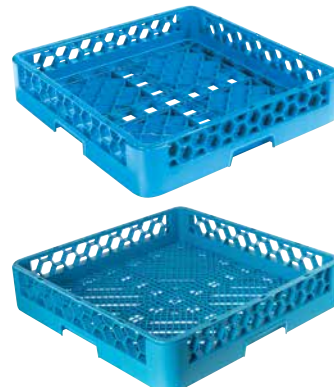

Open vs. Closed Racks

- Open racks: Better cleaning and drying, prone to dirt and contaminants; use with dust covers
- Closed racks: Protect dishware from contaminants, hinder drying process; use with a tight-fitting lid

Base Racks

- Open base racks: Ideal for pots, pans, and irregularly shaped items
- Combination or flatware racks: Tighter pattern on the bottom, prevents small utensils from falling

PRODUCE STORAGE GUIDE

32°F Ideal

Store in back of cooler.

ITEM	TEMP. °F	STORAGE
Apples*	31°-32°	Avoid excess movement. Do not rinse.
Broccoli	32°-35°	Store in covered box with drain shelf
Cabbage	32°-35°	Leave wrapper leaves on. Store covered.
Cantaloupe*	38°-42°	Ripen at room temperature.
Carrots	32°-35°	Do not wash until ready to serve.
Cauliflower	32°-35°	Store in original shipping crate, single layers. Store only briefly.
Celery	32°-35°	Keep covered and sprinkle with water.
Corn	32°-34°	Store in original cartons and stack for good air flow.
Grapes*	32°-40°	Store in original cartons. Air circulation causes shriveling. Store only briefly.
Lettuce	32°-35°	Store tightly with drain shelf or colander
Mushrooms*	34°-40°	Put in cooler immediately. Keep dry.
Oranges* (FL)	32°-35°	Need good air circulation. Use dunnage rack.
Peaches	32°	Store at 65°-70°F until ripened.
Pears*	32°-35°	Store at 60°-65°F until ripened.
Radishes	32°	Rinse, remove tops, and drain before storing in covered containers.
Strawberries	32°-35°	Store in original carton. Do not wash or trim before storing. Store only briefly.

45° to 55°F Ideal

Store in warmest part of cooler or coolest section of kitchen.

ITEM	TEMP. °F	STORAGE
Avocados*	40°-45°	Handle gently. Ripen at room temperature.
Cucumbers	45°-50°	Do not wash or sprinkle with water.
Lemons*	45°-50°	Absorb odors easily.
Onions	45°-50°	Keep cool, dry, and ventilated.
Oranges*(CA)	45°-50°	Proper rotation will maintain good fruit.
Peppers	45°-50°	Very susceptible to chill damage.
Pineapple	45°-50°	Won't ripen after harvest. Handle gently.
Squash	40°-55°	Soft shell cooler than hard shell.

55° to 65°F Ideal

Store in coolest part of kitchen. Do not refrigerate.

ITEM	TEMP. °F	STORAGE
Bananas*	56°-60°	Open lid to avoid too quick ripening.
Potatoes	60°-70°	Store in dark area. Cooler temperatures cause accumulation of sugar.
Tomatoes*	55°-65°	Keep out of direct sunlight. Stack palettes to accelerate ripening.
Watermelons*	50°-60°	Store green side up. Cut pieces should be stored in the cooler.

Storage Times

Item	Time
Apples	2-6 months
Broccoli	10-14 days
Cabbage	3-6 weeks
Cantaloupe	15 days
Carrots	4-6 weeks
Cauliflower	2-4 weeks
Celery	2-3 months
Corn	4-8 days
Grapes	2-3 weeks
Lettuce	4-6 weeks
Mushrooms (whole)	7-10 days
Oranges	2-3 weeks
Peaches	5 days
Pears	2-7 months
Radishes	3-4 weeks
Strawberries	5-7 days
Avocados	7-10 days
Cucumbers	10-14 days
Lemons	4 weeks
Onions	6-7 months
Oranges (CA)	3-4 weeks
Peppers	2-3 weeks
Pineapple	4-5 days
Squash	5-7 days
Bananas	2-7 days
Potatoes	1-3 weeks
Tomatoes	4-7 days
Watermelons	7-10 days

What Is Ethylene Gas?

Items marked with an asterisk (*) produce ethylene gas, an active plant hormone required for the ripening process. While this is good in certain quantities, some produce can be damaged by ethylene gas exposure, especially leafy vegetables. Be sure to arrange your produce carefully.
